About Me

I am a student of Electrical and Electronics Engineering and Computer Engineering at the Turkish-German University. I am good at analytical thinking and teamwork, and I am eager to improve myself through new projects.

Education

Turkish-German University

Electrical and Electronics Engineering (Undergraduate)

3th grade -- Expected graduate: 2026

Turkish-German University

Computer Engineering - Double Major (Undergraduate)

3th grade -- Expected graduate: 2027

42 Istanbul

C/C++ programming and Software Engineering Student

2024 - Expected graduate: 2026

Experience

T3 Foundation – Educator Mentor Program

01.2025 – Present

Educator Mentor Scholarship

- Serve as a mentor at T3 Deneyap Workshops, guiding students in technology, software, and engineering fields.
- Support project development processes while enhancing teamwork, problem-solving, and creativity

Boğaziçi University Sabih Tansal High Current Laboratory

07/2024 - 08/2024

Internship

- Actively participated in testing processes for electrical power systems, focusing on various electrical machines and high-voltage systems.
- Worked with high current testing equipment and procedures, gaining practical experience in the electromechanical industry and deepening technical expertise.

Mercedes Benz Türk A.Ş. / Aksaray Factory

07/2023 - 08/2023

Basic Internship

- Received comprehensive theoretical and hands-on training in four key areas:
 - Basic Level KUKA Robot Programming
 - Basic Machine and Metal Technology
 - Basic Level PLC Usage
 - Pneumatic and Hydraulic Systems
- Completed a 30-day internship that provided valuable practical experience and foundational education.

Turkish-German University

2022-2023

Student Tutor

- Participated in the Tutor (Peer Learning) program as a mentor student for two semesters. Facilitated peer-to-peer learning and supported fellow students in developing academic and practical skills.

Projects

Turkish-German University Hermod Hyperloop Team

09/2024 - Present

Linear Induction Motor Design and Analysis

- I am an active member of the Hermod Hyperloop Team within a TÜBİTAK-supported Hyperloop project, focusing on the design, performance analysis, and optimization of linear motors in a collaborative environment. This project not only enhances my technical expertise but also provides valuable experience in innovative transportation technologies.

42 Istanbul - libft - so_long - Minitalk - push_swap - Born2beroot - Shell Projects

07/2024 - Present

Common core Student

- As part of my education at 42 Istanbul, I have developed a diverse portfolio of projects in C, focusing on algorithm design, memory management, and system programming. In libft, I rebuilt the standard C library to solidify my programming fundamentals; ft_printf and get_next_line refined my skills in data formatting and efficient file handling; and push_swap challenged me with advanced sorting algorithms. Through Minitalk, I designed a data exchange program using UNIX signals for client-server communication, while Born2beroot provided hands-on experience in Linux configuration, security, and virtual machine management. Completing the so_long 2D game project further enhanced my skills in game development and creative software design within a collaborative, project-based environment.

Related and Soft Skills

- Problem-solving, Teamwork, and Communication
- Arduino
- C/C++ , Java
- VS Code, Matlab, Proteus, Git, Bash, Shell, Linux

Languages

- German C1 (TestDaF TDN4 certified)
- English B2
